CASE STUDY #1

BUILDING THE FUTURIST'S STRATEGY CONE™

A Conceptual Human-Controlled
Governance Framework for Agentic AI in
Internal Audit

THE CHALLENGE

July 2026

As organizations began exploring Agentic AI, internal audit professionals were seeking practical approaches to governance, accountability, risk management, evidence management, reporting, and meaningful human oversight. Guidance in this emerging area continued to evolve.

Key Question

"How should Internal Audit approach governance and assurance over AI agents capable of autonomous decision-making?"

THE RESPONSE

To address this emerging challenge, I developed THE FUTURIST'S STRATEGY CONE™, a conceptual human-controlled governance framework for Agentic AI in Internal Audit.

The project included:

Research

- Conducted research on governance, accountability, risk management, evidence management, reporting, and meaningful human oversight for Agentic AI.

Framework Creation

Developed a four-layer conceptual governance structure:

RISK → AUDIT → EVIDENCE → REPORT

The framework presents a conceptual approach for organizing governance activities, audit procedures, evidence management, reporting, and meaningful human oversight throughout the internal audit process.

Supporting Resource

- Developed a companion 362 Agentic AI Risks Excel Library to support risk identification and audit planning.

Publication

- Published the framework on 15 July 2026 through LinkedIn for research, education, innovation, and professional discussion.
